Eplan Certified Engineer
Expertise that sets you apart.

With the 'Eplan Certified Engineer' (ECE) qualification, you can demonstrate your advanced knowledge of Eplan software. Our certification programme combines various training courses for qualified engineering.

The combination offers a learning environment that is optimally adapted to practical use in companies. Structured around real tasks, industry-specific requirements and typical workflows.

Companies benefit from clearly structured competence levels, which enable Eplan users to develop their expertise in a targeted manner. The multi-level ECE programme provides practical, tailor-made certifications for various role requirements.

Eplan Certified Engineer Silver – Key-User Level

Become a certified Eplan key user – with our internationally recognised qualification programme. Develop your skills with the Silver certification to become a confident user.

Eplan Certified Engineer Silver-Certificate

What you will learn:

- Developing strong Eplan skills to optimise design processes

- Applying proven methods for project organisation, compliance with standards and data quality

- Handling circuit diagrams, article data, evaluations and standards with confidence

- Developing practical knowledge that can be applied company-wide

Examination
2 days

PLC and BUS Systems
2 days

Articles and Master Data
2 days

Electrical Design Extension
3 days

Electrical Design Essentials or Electrical Design Refresh
5 days

Eplan Silver Certification: 14 days

What you bring to the table:

- There are no prerequisites for this training course.

Who benefits from this course?

- All Eplan users who want to learn how to use the software professionally, as well as companies that want to bring engineering expertise in-house.

Format:

Online or onsite (depending to local availability)

Register

Eplan Certified Engineer Gold – Specialist Level

Become a certified specialist – with our internationally recognised qualification programme. Achieve the gold standard by specialising in electrical design & automation and the digital twin.

Electrical Design & Automation

Electrical Design & Automation
Eplan Certified Engineer Gold-Certification

What you will learn:

- Advanced electrical engineering processes
- Methods for standardising and automating design processes
- Optimisation of global workflows and the documentation quality

Practical Training inc. Examination
5 days

Scripting and Automation
2 days

Automated Electrical Design Extension
5 days

Eplan Gold Certification in Electrical Design & Automation: 12 days

What you bring to the table:

- A completed Eplan Certified Engineer Silver Certification

Who benefits from this course?

- All key users of Eplan who wish to deepen their knowledge in the field of electrical design and automation or in the use of Eplan Pro Panel.

Format:

Online or onsite (depending to local availability)

Register

Phone: +44 (0)1709 704100

Eplan Certified Engineer Gold – Specialist Level

Become a certified specialist – with our internationally recognised qualification programme. Achieve the gold standard by specialising in electrical design & automation and the digital twin.

Digital Twin

Digital Twin
Eplan Certified Engineer Gold-Certification

What you will learn:

- Establishing digital consistency from engineering to operation
- Creation, maintenance and quality management of product and plant-specific digital twins
- Use of modern engineering methods and data-driven processes

Practical Training inc. Examination
5 days

3D Panel Design Extension
4 days

3D Panel Design Essentials
3 days

Eplan Gold Certification in Digital Twin: 12 days

What you bring to the table:

- A completed Eplan Certified Engineer Silver Certification

Who benefits from this course?

- All key users of Eplan who wish to deepen their knowledge in the field of electrical design and automation or in the use of Eplan Pro Panel.
